

CLAIMS

What is claimed is:

- 1 1. A method for comparison reporting in a supply chain management framework,
2 comprising:
3 a) selecting a plurality of supply chain analyses;
4 b) locating results of the selected supply chain analyses;
5 c) comparing the results of the supply chain analyses; and
6 d) generating a report on the comparison.

- 1 2. The method of claim 1, wherein each of the supply chain analyses includes a
2 separate version of a single supply chain analysis.

- 1 3. The method of claim 1, wherein the results include cost information.

- 1 4. The method of claim 1, wherein the supply chain analyses are selected utilizing a
2 network.

- 1 5. The method of claim 4, wherein the supply chain analyses are selected utilizing
2 TCP/IP protocol.

- 1 6. A system for comparison reporting in a supply chain management framework,
2 comprising:
3 a) logic for selecting a plurality of supply chain analyses;
4 b) logic for locating results of the selected supply chain analyses;
5 c) logic for comparing the results of the supply chain analyses; and
6 d) logic for generating a report on the comparison.

- 1 7. The system of claim 6, wherein each of the supply chain analyses includes a
2 separate version of a single supply chain analysis.
- 1 8. The system of claim 6, wherein the results include cost information.
- 1 9. The system of claim 6, wherein the supply chain analyses are selected utilizing a
2 network.
- 1 10. The system of claim 9, wherein the supply chain analyses are selected utilizing
2 TCP/IP protocol.
- 1 11. A computer program product for comparison reporting in a supply chain
2 management framework, comprising:
3 a) computer code for selecting a plurality of supply chain analyses;
4 b) computer code for locating results of the selected supply chain analyses;
5 c) computer code for comparing the results of the supply chain analyses; and
6 d) computer code for generating a report on the comparison.
- 1 12. The computer program product of claim 11, wherein each of the supply chain
2 analyses includes a separate version of a single supply chain analysis.
- 1 13. The computer program product of claim 11, wherein the results include cost
2 information.
- 1 14. The computer program product of claim 11, wherein the supply chain analyses are
2 selected utilizing a network.
- 1 15. The computer program product of claim 14, wherein the supply chain analyses are
2 selected utilizing TCP/IP protocol.
